## Contents

<b>1</b>	<b>1.Basics</b>	<b>1</b>
1.1	A. "set" assigns a value to a symbol . . . . .	1
1.2	B. "setq" sets a value of a variable . . . . .	1

## 1 1.Basics

### 1.1 A. "set" assigns a value to a symbol

```
(set 'fname "Dclinee")
```

Since quoting the symbol name is so common a second assignment opetator was created, "setq".

### 1.2 B. "setq" sets a value of a variable

```
(setq fname "dclinee")
```

but can take multiple arguments

```
(setq first_name "denng"  
      secod_name "changlin")
```

It returns the last value set.
